**Professional
Summary**

I'm a 26-year-old developer living in Eskişehir, Turkey. I am self-employed and have created mobile games for clients or for publishing through Umay Game Studio, which I co-founded.

I started developing games and apps as a hobby 6 years ago. When I decided to pursue development as a career, I began working full-time in the field. I love a good problem to challenge me.

I developed games for mainly Android and Windows. I specialize in developing mobile hyper/hybrid casual games and have been actively involved in every step of game publishing, from design to publishing and advertising.

Key Skills

C# | Unity | Java | C | Python | JavaScript | SQL | Android Studio | Godot | .NET Framework | ASP.NET Core | Blender | HTML | CSS | Git | Trello
Game Design | Game Physics | Automated Testing | HLSL | AI Pathfinding | Level Design | UI Design | Profiler | Google Play Console | Game Analytics | SDK Implementation

Soft Skills

Conflict Management | Critical Thinking | Teamwork | Problem Solving | Leadership | Planning | Collaboration

Education

ASPIRE INSTITUTE, VIRTUAL

- Academic and professional development program for low-income and first-generation college students.
- Coursework includes a virtual leadership course, interdisciplinary academic sessions, professional development workshops, and case-based instruction from Harvard Business School professors.

ANADOLU UNIVERSITY, ESKİŞEHİR

- Bachelor of Special Education Teacher Training Program

Experience

Aug 2021-
Nov 2023

UMAY GAME STUDIO, ESKİŞEHİR

Co-Founder, Game Developer

- Designed mobile hyper casual games, with full **GDDs & designs** to provide a roadmap for the development, resulting in faster prototyping.
- Created unique **game mechanics and algorithms** to automate common tasks, using **Unity 3D and 2D**, targeting **Android** platform.
- Deployed version tracking system using **Git**'s versioning protocol and scheduling tasks in **Trello** to ensure accuracy with updates, resulting in less time spent on debugging incidents.
- Implemented **shader optimization and particle physics** strategies to decrease shader complexity, resulting in an average of 30% enhancement in overall game performance.
- Integrated reporting **API** within gaming client application to generate automated market insights and product optimizations.
- Analyzed & rectified errors in code base, resulting in a 90% **reduction of bugs** and 0 user reported glitches.

June 2020-
Aug 2021
